CLAIMS

1/ A valve or pump gasket for sealing a fluid dispenser device comprising a valve or a pump mounted on a fluid container, said gasket being characterized in that it
5 comprises one or more of the following elastomer materials:

- a) a hydrogenated nitrile butadiene rubber (HNBR);
- b) an octene-ethylene copolymer (OEC); and
- c) a butyl or a halobutyl rubber.

10

2/ A gasket according to claim 1, in which said gasket comprises an alloy of HNBR and of OEC.

15

3/ A gasket according to claim 2, in which the gasket comprises about 20% by weight of HNBR and about 80% by weight of OEC.

20

4/ A gasket according to claim 1, in which said gasket comprises an alloy of HNBR and of butyl or of halobutyl rubber.

25

5/ A gasket according to claim 4, in which said gasket comprises about 60% by weight of HNBR and about 40% by weight of butyl or of halobutyl rubber.

30

6/ A gasket according to claim 1, in which said gasket comprises an alloy of HNBR and of ethylene propylene (EP) or of ethylene-propylene-diene-monomer (EPDM).

7/ A gasket according to claim 6, in which said gasket comprises about 50% by weight or more of HNBR and a about 50% by weight or less of EP or of EPDM.

35

8/ A gasket according to claim 1, in which said gasket comprises an alloy of HNBR and of poly-chloroprene rubber (CR).

9/ A gasket according to claim 1, in which said gasket comprises an alloy of HNBR and of styrene butadiene rubber (SBR).

5 10/ A gasket according to any preceding claim, in which said gasket further comprises one or more other ingredient(s) such as inorganic fillers and/or carbon black fillers and/or vulcanization agents and/or pigments and/or processing agents and/or plasticizers.

10

11/ A pressurized fluid dispenser device comprising a valve provided with a moving valve member, said valve being mounted on a container containing both the fluid and also a propellant, with or without alcohol, the device having at least one neck gasket between the valve and the container, and a dynamic gasket through which said valve member slides, said dispenser device being characterized in that at least one of said gaskets is made according to any one of claims 1 to 10.

20

12/ A dispenser device according to claim 11, in which the propellant comprises a hydrofluorocarbon (HFC) gas of the HFC-134a type or of the HFC-227 type.

25 13/ A non-pressurized fluid dispenser device comprising a pump mounted on a container containing the fluid and at least one gasket between the pump and the container, said dispenser device being characterized in that said gasket or at least one of said gaskets is made according to any one of claims 1 to 10.
